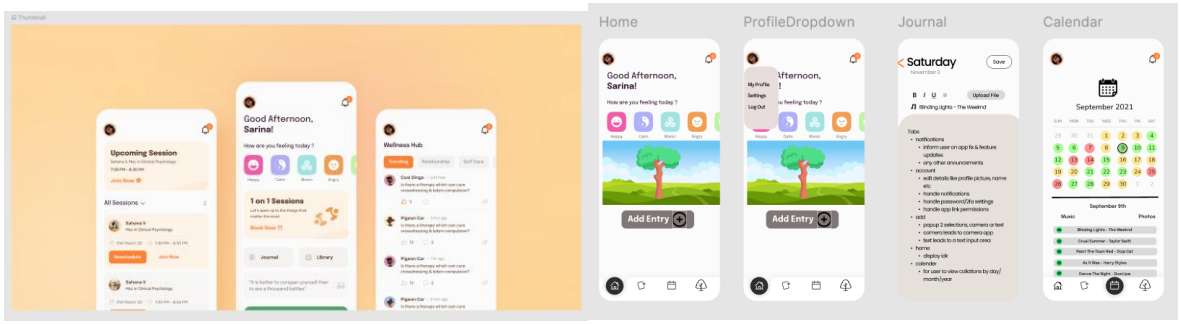
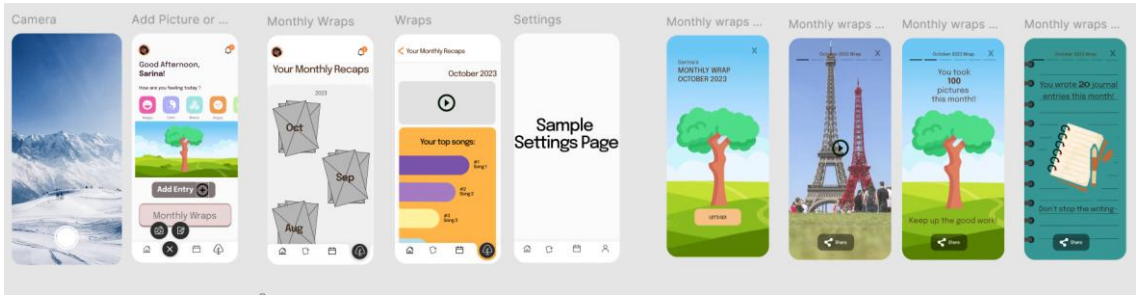
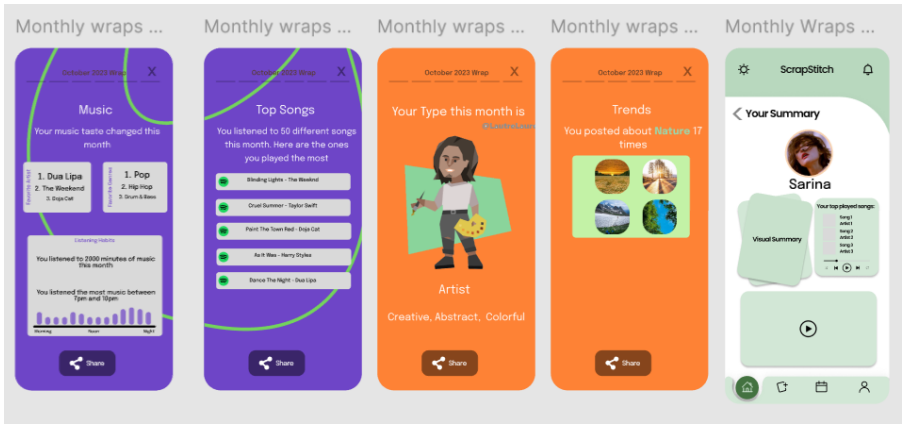
UI/UX course in Singapore University of Technology and Design

In this course we had to design an app. Our team decided to do a memory board app where the user would be able to see monthly wraps and write down notes of their memories. Here are some of the Figma work that we did:

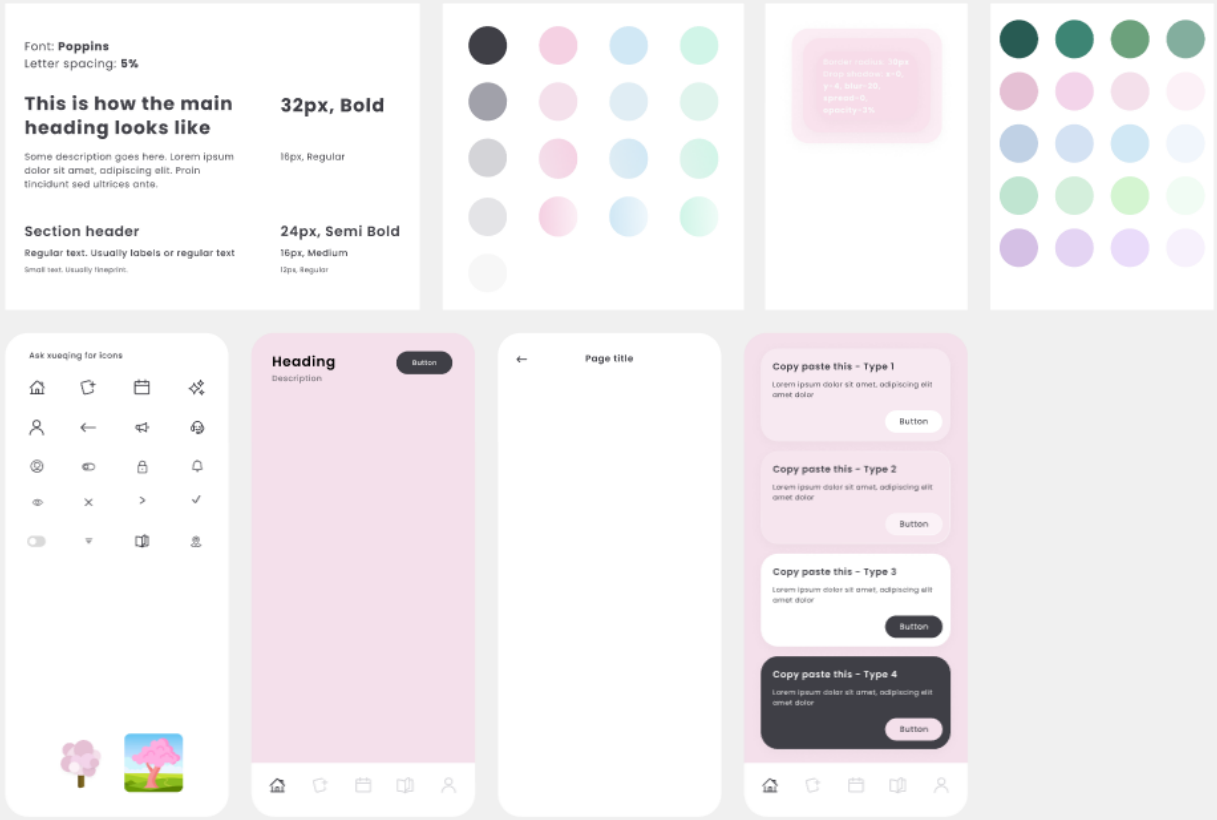






Final prototype:

Style guide, templates, icons



Authentication flow

Monthly Wraps

Blockchain course in Singapore University of Technology and Design

In this course our team was tasked with designing a prototype of a marketplace platform that used Ethereum for authentication. Our focus was on the back end but we still designed a simple front end to make our implementation better.

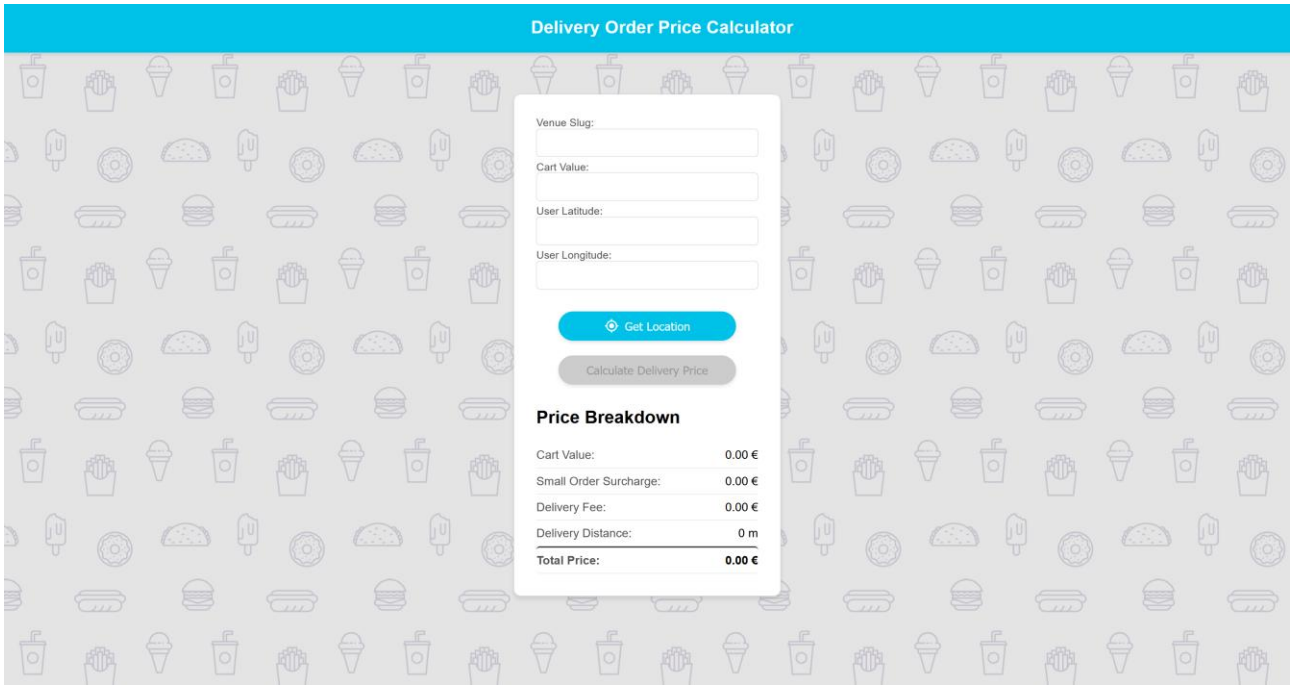
Delivery Price Calculator


This project was for a job application that had a pre-task. In my opinion the frontend turned out great, so I decided to add it here. The project was made using React and TypeScript.
